Skaggs Springs  
April 16-20 1911

Fine Sunny Weather all the time  
Thamnophis common along the  
creek and road following creek.  
Desmognathus fairly common in quiet  
pools and puddles in creek bed.  
Rana boylei common but nearly  
all small. Saw a pair breeding  
in shallow pool in creek bed.  
♂ resting on top of ♀ clutching with  
both front legs around body of ♀ just  
back of shoulders. Both were  
sitting perfectly still at bottom of  
shallow pool. Found them mostly  
in shallow pools in creek bed  
but some few in main stream.  
Sceloporus very common along  
fences and old wood piles both  
in valleys & outtop of hills.  
Gerrhonotus not very common  
although excellent country for  
them. Collected a few both

on hillsides and in valley. Euneces  
fairly common but very wild.  
Saw quite a number running  
along bank at the roadside in hot  
sun. Very difficult to catch as they  
would run into holes & crevices in  
the bank. Even putting them into  
alcohol at once it was hard to  
keep them from breaking their  
tails. Saw two *Boscaiina* but  
missed one, also missed one  
gopher snake the only one seen.  
Took 3 *Diadophis* one found dead  
on road. Found it poor for Salamanders  
only getting a few *Ambystoma* and  
one *Batrachoseps*. All under old  
oak stumps on hillsides far  
from any running streams.  
Toads were fairly common. Took  
several in flower garden around  
hotel. Took a few *Hyla* around  
Creek bed were not very  
common and heard few at night.

April 23/11

Stuck in U bid - Chest of alcohol  
gone astray - Lost somewhere  
in freight shed. Surrounding  
Country very green and snow  
on adjacent mountains. Took  
a luggage and went out to  
look at the Country. Took  
a few *Trematylus* in Creek  
about all I saw (Saw) Saw  
a few *Sceloporus*. *Rattus* are  
reported common about  
July in some parts of the  
mountains & saw quite a  
few *Sbins* hung up in shop  
windows. Started April 28 on  
Mendocino Stage towards  
Comptche. Got off about 1 1/2  
miles east of Comptche, about  
the center of the redwood  
belt. Weather cold rainy & foggy  
bum for working. Would be  
good Country in hot weather

Saw a great many *Terriviviparus*  
 crossing road and crawling  
 up the bank. Stage driver says  
 this is a sign of rainy weather  
 & as soon as it clears up and  
 the sun comes out they all  
 head for the creek again. Driver  
 reported *Serranotus* common  
 on the roads and also a very  
 red poisonous lizard very common  
 I suppose he means *Plethodon*.

} *Reflexus* 1 } 17/11

1<sup>st</sup> day at Paradise Took 3  
Asaphids. Found two in  
water swimming around like a  
frog and jumped one out  
of the pond into the water  
They swim slowly just like  
a toad. There were the only  
ones seen and were collected  
in what I know as John  
Henry's hunting ground S.W.  
side of mountain about 6000 ft

Collected 5 or 6 *Chironomus*  
larvae but still lost  
all. They were larger than  
the collected at Paradise  
and may be new to the area

larger too. The small lakes  
and pools were drying up  
and several were lost 2  
days already.

Aug 28 1911

2203  
Lake Crescent about 500  
ft alt. Ten miles long  
Steep hills all around  
Country at present dry and low  
trees, flowers quite scarce  
I saw ~~one~~ T. Pallas reported  
a red Salamander common  
in small lake above Crescent  
but I found no frogs  
evidence of Salamanders only  
above bog but I saw  
some there and a couple  
of Hyles, but very few  
considering locality. I found  
fairly good. Some swimming  
in Lake about 70ft from  
Lake
